

European Agricultural Landscapes (EAL)

European Agricultural Landscapes (EAL) have an important cultural value and play a crucial role in the conservation of biodiversity and the productivity of farmland. Young farmers and landowners need training to manage the countryside in the sustainable way that society is asking for.

FEAL project

The FEAL project will aid farmers in conceptualizing and implementing innovative farming techniques, linking the interests of farmers and the broader society.

Based on **Case Studies** and an **e-atlas of EAL**, the FEAL project will offer a **flexible training system** to train entrepreneurial skills aiming at sustainable entrepreneurship in rural areas.

Real experiences of successful implementations of farming concepts aiming at win-win-situations will be shared from country to country within Europe to **stimulate** innovative entrepreneurial acting in this field.
